

Velra Dragon

The rare, expensive and beautiful blue-bellied Velra live in the terraced lakes of the southern montas that spill into the narrow canyons between the megaliths. With long narrow snouts, needle teeth and long hooked talons, velra are uniquely adapted to fishing and occasionally hunt over the fjords of the Serban coast. Velra boast superior climbing speed, and a diving velra, closing on its prey at over a hundred and fifty miles per hour, rarely misses.

Statistics

Name: Sarka
